AN OCEAN OPPORTUNITY RADAR

Would you *back* this?

Pitchdle tells funds and accelerators which ocean startups to back, watch or avoid, why, and who they should talk to next. A daily pitch game adds what the crowd makes of every pitch.

THE CHALLENGE ASKS FIVE QUESTIONS. PITCHDLE ANSWERS EACH ONE.

1	**Which startups are most promising?**	→ A call for every startup: Back, Watch or Avoid
2	**Why, and do they fit the thesis?**	→ Fit with the A'Pelago accelerator and Redstone investment theses, with the reasons
3	**How ready are they?**	→ Four readiness levels: ocean impact, business, technology (TRL), investment
4	**Who should they talk to next?**	→ Investors, grants, partners and clients, matched and ranked
5	**What should happen next?**	→ One next move, aimed at the weakest readiness level

Perception vs reality: the gap is the signal

OCEAN PLASTICS · TIDELEDGER

Pick up a bottle on the beach, scan it, earn a token.

€3M to launch in 40 countries

0 — 5

Crowd 3.4 · Evidence 1.7

The pitch outsells the evidence — Avoid

AQUACULTURE & FEED · RAKKO FEED

Dried Baltic seaweed in cow feed. The cows burp less methane.

€800k to double its drying plant

0 — 5

Crowd 2.6 · Evidence 4.0

Stronger than its pitch — Back

The two designed demo cases: fictional startups, read by 30 demo players and scored by the evidence engine.

1 Find

Real ocean startups from open news feeds, screened by AI for field and country.

2 Read

The evidence, the crowd, A'Pelago, three AI models and social media, all on the same four calls.

3 Decide

A call, the readiness levels, thesis fit, and who to call next.

One startup, *read* from every side

AQUACULTURE & FEED

Dried Baltic seaweed in cow feed. The cows burp less methane.

€800k to double its drying plant

— Rakko Feed

Is this...

NOVEL: 0 1 **2** 3 4 5

USEFUL: 0 1 2 3 **4** 5

PLAUSIBLE: 0 1 2 3 **4** 5

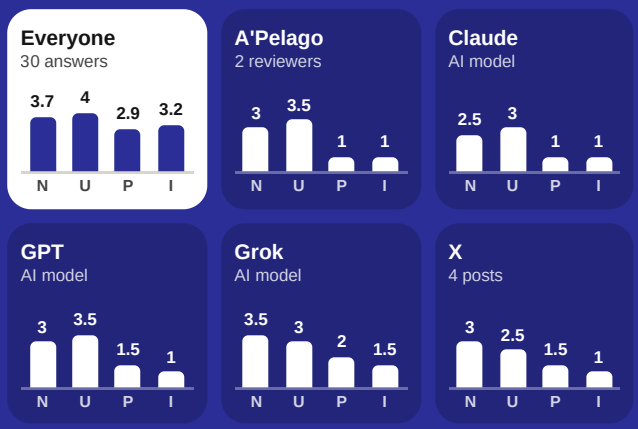

INVESTABLE: 0 1 2 **3** 4 5

LOCK IT IN ↵

Five startups a day, the same for everyone: read the pitch, make four final calls from 0 to 5, then see your read next to everyone else's. Investors see the full card first, with every review.

2 The reviews

TideLedger NOVEL · USEFUL · PLAUSIBLE · INVESTABLE

A fictional demo startup. The crowd's scores are from the demo; the others are example scores to show the layout.

The crowd: everyone's answers, weighted by who gave them.

A'Pelago: the average of its own representatives' evaluations.

AI models: Claude, GPT and Grok each rate the startup's profile.

Social media: what people say on X, Threads, LinkedIn, Reddit and Bluesky. Only posts the model actually cited count.

All on the same four calls, so they compare at a glance; they run by themselves as soon as a startup is added.

3 The radar : the dashboard funds and accelerators work from

Rakko Feed Back

aquaculture & feed

Dried Baltic seaweed in cow feed. The cows burp less methane.

€800k to double its drying plant

€650k raised · Seed · 2 investors

N	U	P	I	AVG
2.5	2.9	2.6	2.6	2.7

Gap 1.4 · evidence > crowd

Next: Raise the next round with Redstone

READINESS

Ocean impact	4.5
Business (BRL)	4.4
Technology (TRL 8)	4.4
Investment	4.0

THESIS FIT

Redstone investment	4.1
A'Pelago accelerator	3.4

NEXT STEPS, RANKED

1 Redstone · 2 Aqua-Spark · 3 Hatch Blue · 4 Katapult Ocean · 5 EU BlueInvest

Back at a thesis fit of 3.5 or more, **Avoid** under 2.5, **Watch** between, and softened to Watch when the crowd overrates the pitch or the evidence isn't confirmed. Next steps come from a landscape of real investors, grants, partners and clients, matched on sector, tech stage and region.

From a headline *to a call*

1 Find
Live mode searches Hacker News and Google News by field and country. An AI screen keeps only real startups and files the rest with the reason.

2 Fill
Each tracked startup's money raised, investors, stages, vision and evidence are filled from its website and news, only from what the sources say.

3 Check
One small AI call checks the card players will see: an operating startup, a pitch that says what it does, nothing misleading.

4 Review
Players rate it in the daily game; A'Pelago, Claude, GPT, Grok and social media review it on the same four calls.

5 Decide
The radar gives the call, the readiness levels, thesis fit, ranked next steps and the next move.

HONEST BY DESIGN

- ✓ Unknown stays unknown: scores use only evidenced factors, and every startup shows its coverage.
- ✓ Tech readiness comes from pilots and deployments, never from a startup's own claim.
- ✓ Evidence estimated by AI is marked as such, and a startup is never called Back until the host confirms it.
- ✓ A social media read only counts posts the model actually cited on that platform.
- ✓ Investors are vetted by moderators, and guests can never outvote members.
- ✓ The game never waits on the web or on an AI model.

MEASURED AGAINST THE EVIDENCE

Ocean Impact: measurability, problem pressure, solution potential.

Business Readiness (KTH BRL): market, value proposition, business model, scalability.

Technology Readiness: TRL 1–9, from evidence.

Investment: Redstone's ten factors, from team and market to financials and deal dynamics.

The engine maps them onto the players' four calls, so crowd and evidence meet on one scale.

HOW MUCH AN ANSWER COUNTS

×0.5
Guest. All guests together count for at most 40% of a card

×1
Player. Signs up and plays at once

×2
Investor. Approved by a moderator first

BUILT TO RUN ANYWHERE

Python, FastAPI and one SQLite file; plain HTML, CSS and JavaScript with no build step. One command runs it on a laptop, any phone plays it with nothing to install, and one OpenRouter key runs every AI task.

Crowd-sourced venture intelligence

We measure perception against reality at scale, and tell funds and accelerators where the gap is and who to call next.
